

```

public class WeirdArrayStuff {
    public static void main(String []args) {
        final int SIZE = 5;
        int []A = new int[SIZE];
        for (int i = 0; i < A.length; i++) {
            A[i] = i * 10;
        }
        int []B = A;
        for (int i = 0; i < B.length; i++) {
            B[i] *= 2;
        }
        if (A == B) {
            System.out.println("same");
        } else {
            System.out.println("different");
        }
    }
}
