

```
import java.util.Arrays;

public class WhatsWrong {
    public static void main(String []args) {
        Point []points = new Point[3];
        System.out.println("before: " + Arrays.toString(points));
        for (int i = 0; i < points.length; i++) {
            points[i].move(1, 1);
        }
        System.out.println("after: " + Arrays.toString(points));
    }
}
```

as of this line  
all 3 are null

Point  $\downarrow$  p = new Point()
