

Security, Privacy, and Cooperation

- [1] A Secure Credit-Based Incentive Mechanism for Message Forwarding in Noncooperative DTNs
- [2] FaceChange: Attaining Neighbor Node Anonymity in Mobile Opportunistic Social Networks With Fine-Grained Control
- [3] A Cooperative Forwarding Scheme for Social Preference-Based Selfishness in Mobile Social Networks
- [4] A Privacy-Preserving Protocol for Utility-Based Routing in DTNs
- [5] Fine-Grained Encountering Information Collection under Neighbor Anonymity in Mobile Opportunistic Social Networks
- [6] An Incentive Driven Reliable Message Exchange Scheme in Post-Disaster Situation Using Delay Tolerant Network
- [7] Distributed Privacy-Protecting Routing in DTN: Concealing the Information Indispensable in Routing
- [8] Distributed Privacy-Protecting DTN Routing: Concealing the Information Indispensable in Routing
- [9] Relay Selection Based on Social Relationship Prediction and Information Leakage Reduction for Mobile Social Networks
- [10] A Secure Group-Based Communication Scheme in Disaster Response Environment Using Delay Tolerant Network
- [11] Promotion of Cooperation in Public Goods Game by Socialized Speed-Restricted Movement
- [12] Anonymizing Neighbor Nodes for Privacy Protection in Mobile Opportunistic Social Networks with Fine-Grained Control
- [13] Analytical Framework for Heterogeneous DTNs Considering Node Cooperation Incentives and Message Lifetime
- [14] ESRS: An Efficient and Secure Relay Selection Algorithm for Mobile Social Networks
- [15] ESRS: An Efficient and Secure Relay Selection

- [16] Differential Spread Strategy: An Incentive for Advertisement Dissemination
- [17] Reform ID—Achieving Proximate Node Anonymity in MOSNs
